Business Game Theory Applied to Social Network

PROJECTS

An Inventory Model Application with Periodic Review for the Manufacture of Distribution Transformers

Using R markdown to perform the estimation of the parameters for each of the distributions and goodness of fit contrasts bases on a project(made by Eduardo Gutierrez Gonzalez) of proposing an Inventory Application Model with a periodic review under the policy (R, S), where the demand is not constant and varies widely.

Business Game Theory Applied to Social Network

Using Fortran to analyse the topology of a network bases on the data that is the 22 soccer teams that participated in the World Championship in Paris, 1998 and perform a game with this network by calculating valor Myerson for each team.
